Lecture 14-16: 1441-113 Aud. 3

Evaluation

First, we will go over the evaluation results - I will show them - and present my takeaways. I suggest that we can speak more about them in the classes Thursday, where we have a room more inviting for that.

Student presentations: Concept explaining

Preparation:

I will appoint a timekeeper, who has to be comfortable being strict in keeping time and whose task will be making sure things run smoothly

Total duration: 30 min:

- **Create groups:** *Duration 5 min:* Create 6-10 groups that prepare presentations on concepts such as:
 - Covariance
 - Regularisation
 - Pooling
 - Gradient descent
 - Log-likelihood maximisation
 - Cross-validation
 - Link function
 - Hyperparameters
 - Principle component analysis
 - Back-propagation
 - Bias-variance decomposition
 - Model stability
 - Design matrices
 - * X
 - * Z
 - Feature matrix
 - Out of sample validation
 - Your favourite concept
 - Your least favourite concept
- **Prepare** the presentations: *Duration 25 min*
 - Plan your key messages:
 - Plan what illustrations to use (**use blackboard**, not slides)
 - Plan who will present orally: try to get at least three different speakers
 - Choose a *moderator*, i.e. someone that will take questions from the crowd

Break: *Duration 10 min* * Suggestions: * Get some fresh air * Go to the toilet * Eat a snack * Drink some water

Presentation: *Duration 50 min:*

General point for the timekeeper: you have to be strict and everyone has to adhere to the timekeeper

- 6 groups: 5 min for presentation, 3 min for questions
- 7 groups: 4½ min for presentation, 3 min for questions
- 8 groups: 4½ min for presentation, 2½ min for questions

Present from the lectern: everyone from the group should join (whether they are to present orally or not)

- Make sure to get your key messages across
- Provide meaningful illustrations (these can be drawn in parallel with the oral presentation)
- You may indicate what you still find hard to grasp
